

## EDUCATION

---

### University of California, Berkeley

Bachelor of Art, Computer Science

(GPA: 3.65) 2016-2020

Master of Science, Computer Science

2020-2021

## RELATED COURSEWORK

---

CS 70: Discrete Math and Probability Theory

CS 170: Eff. Alg. and Intractable Problems

CS 162: Operating Systems and System Programming

CS 262: Advanced Topics in Computer Systems

CS 169: Software Engineering

CS 186: Intro. to Databases

CS 189: Intro. to Machine Learning

EECS 127: Opt. Models and App.

INFO 159: Natural Language Processing

DATA 100: Principles and Tech. of Data Sci.

CS 267: Applications of Parallel Computers

CS 284: Computer Graphics

## SKILLS

---

### Programming Languages

CPython, Java, HTML/CSS, Javascript, Markdown, SQL, C#, C, C++

### Libraries

OpenMP, MPI, CUDA, OpenGL, Numpy, Pandas, Matplotlib, PyTorch, Bokeh

### Web App Frameworks

Django, Ruby on Rails, Jekyll, Flask

### Software & Tools

MS Office, LaTeX, G Suite, Adobe Illustrator, Unity

### Software Development

Test Automation, Docker, Bash Scripting, Git / SVN, Agile / Scrum

## WORK EXPERIENCE

---

### Freddie Mac, McLean

May 2019-August 2019

*Financial Engineering Intern*

- On-site internship under this government-sponsored enterprise.
- Project 1: Developed data visualizations (Heatmaps, Bar charts, 3D) using Python libraries Bokeh and Pandas. The visualization system is used for housing loan risk analysis where feature recognition and correlation analysis are essential part of the algorithms and model development.
- Project 2: Developed a Django web application that hosts the visuals of the data models. The web application is designed for direct and interactive access to the data by the users. The visualization is configurable by customizing axes and Django caching is deployed for high performance.

### Audience1st

January 2019-May 2019

*Software Developer*

- Part of an academic project where groups of students are assigned to small businesses or startups to work on some of their features of their web application. Most of the projects were done in Rails. Involved in many Software Engineer practices, such as continuous integration and user stories.
- Worked on an application for Audience1st and implemented magic links and quality-of-life changes.

## ACADEMIC PROJECTS

---

### GamesCrafters

2018-2021

*GamesmanPuzzles, Project Lead*

- Created the GamesmanPuzzles Project, a simple Python interface to solve abstract Puzzle problems with high performance. Developed under the mentorship of Professor Dan Garcia.
- Taught a group of undergraduates the principles of software engineering.
- Extended Python with C and explored with multiple optimization techniques (i.e. HashTables, MapReduce) to achieve high performance.
- Showcases the results using a Web API through Flask.

## Member

- Member of a group devoted to perfectly solving two-player games aka combinatorial and computational game theory.
- Helped implement the Universal Web API to combine game solutions from the multiple GamesCrafters backends (ie GamesmanJava, GamesmanClassic). Specifically, worked on translating chess solutions from the Syzygy endgame tablebases from its public API.
- Researched using Decision Trees as a way of compressing key-value pairs into a series of feature decisions (i.e. number of pieces on the board, whether the second piece is an "X" or an "O").

## Actor Migration for Ray

2020

### Graduate Class Project

- Worked on adding an Actor migration feature for the Ray Python package, the simple, universal API for building distributed applications.
- Goal was to increase utilization of resources by moving stateful Actors in Nodes that are not sufficiently utilized and placing them together to increase utilization. Requires migrating state, objects and object relationships.
- Worked on Reference Table (Ownership) migration and Benchmarking.

## DataBears, Berkeley

2019

### Content Creator/TA

- Developed content for the SQLite lecture, which included a Jupyter Notebook lab, a Gradescope autograder environment, and a Introduction to Databases presentation.
- Content covered relational database, DMS, SQL queries and Pandas interactions.

## TEACHING EXPERIENCE

---

### Education Enrichment Center, Pleasanton

June 2018-August 2018

#### Math Teacher/SAT Content Creator

- Responsible for teaching adolescents math in preparation for the school year as well as developed a curriculum for SAT practice.

### Dept. of Computer Science, UC Berkeley

2017-2021

#### Tutor

- CS 61A: Structure and Interpretation of Computer Programs, CS 61B: Data Structures

#### GSI

- CS 61C: Great Ideas in Computer Architecture

## EXTRA-CURRICULAR

---

Programmer/Artist in the Game Design Club in 2019.

Publicity Chair of the Berkeley Unit 4 Hall Association in 2016-2017

President of the Amador Valley Game Design Club in 2016.

Volunteered at a Valley Humane Society from 2012-2016

Member of Amador Valley Swim Team from 2014-2016
